

Machining Recommendations

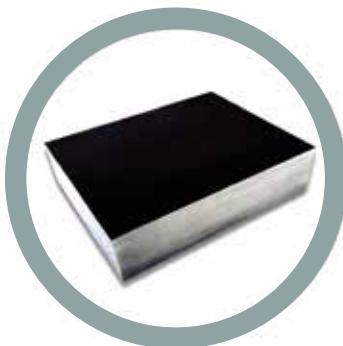

WHAT IS TOOLOX?

Toolox® is a modern quenched and tempered prehardened engineering and tool steel, delivered with measured and guaranteed mechanical properties. The basic idea is to save you time by delivering Toolox heat treated and ready to use. It provides you with lower costs, reduced risks and saves you valuable time in your production process due to its excellent machinability. This combined with the benefit of working with the hardest prehardened tool steel in the world gives you a simple to use material with a wide variety of uses.

Toolox is based on the same low carbon content as in Hardox® and Strenx®, but it is specially developed for tools and machine components working at high temperatures. It has excellent fatigue properties, and you can increase the surface hardness with nitriding or PVD coatings to gain more control over the service life of your tools or components.

In the information that follows, you will find our recommendations of tools to process Toolox. Similar tools from other suppliers might work, but here are the ones we have tested so far.

SHORTER LEAD TIME FROM CONCEPT TO PRODUCTION

5. Adjusting

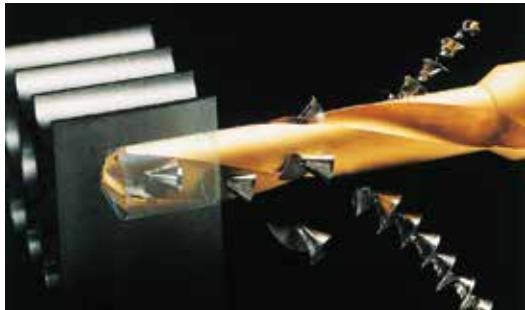

6. Production

DRILLING RECOMMENDATIONS

HSS DRILLS

Use only HSS drills when you have unstable machine conditions. If the machine conditions are good you can use different solid/brazed cemented carbide drill or drills with exchangeable heads.

HSS-Co

Use an HSS-Co drill (8% Co) with a low helix angle and a robust core that can withstand high torques.

**HSS
HSS-E
HSS-Co**

Individual holes can be drilled with an ordinary HSS drill. For a rational production, either a microalloyed (HSS-E) or a Cobalt alloyed (HSS-Co) drill is recommended.

*** WHEN USING A LARGE DRILL DIAMETER (>30 MM), MAKE SURE THAT:**

1. The machine is large and stable enough to raise sectional forces.
2. The spindle has zero play.
3. The workpiece is well clamped.
4. Motor output is equal to or greater than 7.5 kW.

ADVICE TO REDUCE VIBRATIONS AND INCREASE THE LIFETIME OF THE DRILL

- Minimize the distances to the column and between to drill tip and the workpiece
- Don't use a longer drill than necessary
- Always use metal supports
- Clamp securely
- Use a solid and firm table
- Always use coolant
- Coolant mix 8-10 %
- Just before the drill breaks through, disengage the feed rate for a second. Otherwise, play/springback can snap the drill tip. Re-engage the feed rate after the play/springback stops.

SOLID CEMENTED CARBIDE DRILL

For stable machine conditions and with internal coolant. Coolant mix 8-10 % for all drilling.

MILLING RECOMMENDATIONS

CLAMPING

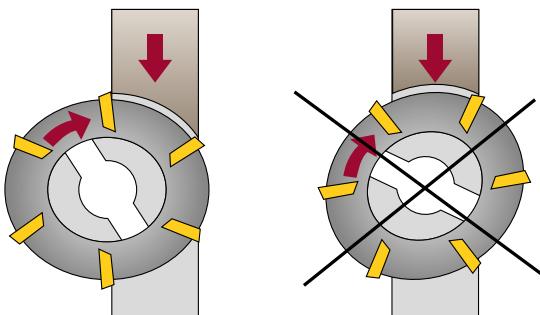

Toolox has a very low level of residual stresses. To get the full effect make sure to use deformation-free clamping. If blanks are gas cut, mill off 5-10mm from the gas-cut edge to get a blank free from residual stresses.

The machinability of Toolox has been improved. During milling you will notice it because the chips produced are very bluish. We have modified the carbide morphology as compared to traditional tool steels, using less carbon in Toolox. Therefore, the heat generated during milling is transferred into the chip and not into the cutting edge/workpiece.

MILLING ADVICE

- Position the cutter off-center (to the left) to achieve a thicker chip at the entry and to avoid thick chip on the exit.
- Avoid cutting through the center line of the cutter, because this can generate vibration.
- Always use down milling (climb milling).
- The recommendation is that the radial engagement of the cutter (a_e) should be 25 or 75-80% of the diameter.

If you enter the workpiece with the roll-into-cut method, the chip thickness on the exit is always zero, and it will help to give a longer tool life.

Roll-into-cut method

Wear after 800 passes

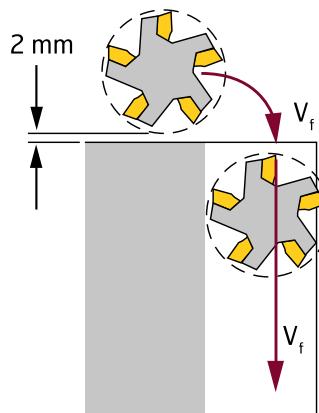

Straight into the workpiece

Wear after 390 passes

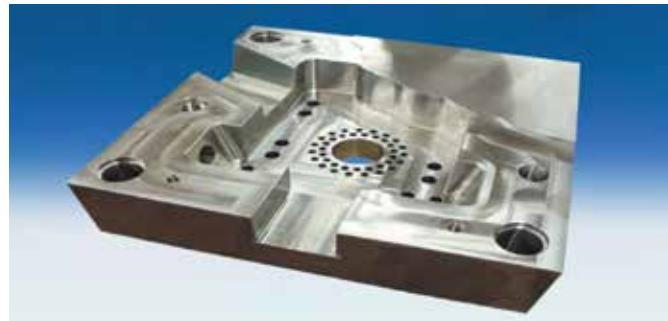

Roll-into-cut method

$$\text{Prog. rad.} = \left(\frac{D_e}{2} \right) + 2$$

INSERT GRADES FOR MILLING

	ISO	ANSI	
P	01	C8	↑
	10	C7	
	20	C6	
	30	C5	↓
	40		
	50

	30	C1	↓
	40		
H	01	C4	↑
	10	C3	
	20	C2	
	30	C1	↓

↑ Wear resistance
↓ Toughness

P ISO P = Steel
M ISO M = Stainless steel
K ISO K = Cast iron
H ISO H = Hardened steel

* Example insert grade 1030.

"The last 2 numbers in the insert grade indicate where in this scale the insert belongs, if the insert has wear or toughness resistance."

INSERT GEOMETRY

The macro geometry affects many parameters in the cutting process. An insert with a strong cutting edge can work at higher loads, but it will also generate higher cutting forces, consume more power and generate more heat.

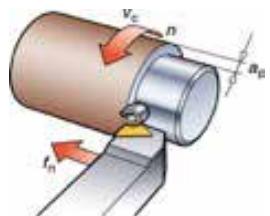

Parameter	Geometry		
	L	M	H
Edge strength	Low	Medium	High
Cutting forces			
Power consumption			
Max chip thickness			
Heat generated			

* Use insert grade P 30-50 with light cutting geometry and a coarse - pitch cutter if the machine power is low and with unstable machine conditions.

TURNING RECOMMENDATIONS

The cutting data recommendations below are applicable to tough cemented carbide grades. These are necessary for operations in which impact may occur, such as when turning plate with gas-cut edges.

METRIC	V_c (m/min)	Toolox 33 150-200	Toolox 40 90-140	Toolox 44 80-120
Feed rate (f_n)	min-max	min-max	min-max	min-max

a_p (depth of cut) max 0.5 x D

Shoulder milling advice

a_p (use the whole cutting length)

a_e (radial depth of cut) max 0.1 x D

TAPPING RECOMMENDATIONS

With the correct tools you can perform all tapping/thread milling operations using all Toolox grades. We recommend four-flute taps, which can withstand the very high torque that occurs during tapping in hard materials. If is not critical, the drilled hole can be 3% larger than standard. This will increase the lifetime of the tap.

Tap for blind holes.

Tap for through holes.

* Thread oil or thread paste is recommended as lubricant.

METRIC	V_c (m/min)	Toolox 33 7-10	Toolox 40 4-9	Toolox 44 3-5

TOOL RECOMMENDATIONS FOR TOOLOX

DRILLING IN TOOLOX

Tool name	Article No.	Diameter range
Seco Feedmax	* SD203A-12.0-36-12R1	2.0-20.0 mm (0.079-0.787 in.)

*Example for Ø 12

Solid cemented carbide drill

Supplier: Seco
Sweden
www.secotools.com

Tool name	Article No.	Diameter range
Seco Feedmax	* SD216A-12.0-180-12R1	3.0-14.10 mm (0.118-0.555 in.)

*Example for Ø 12

Long holes drilling with 16-20xD

Solid cemented carbide drill
Supplier: Seco
Sweden
www.secotools.com

Tool name	Article No.	Diameter range
Cordrill R840 Delta C	R840-xxxx-30-A1A	3.0-20.0 mm (0.118-0.787 in.)

Solid cemented carbide drill

Supplier: Sandvik Coromant AB
Sweden
www.sandvik.coromant.com

Tool name	Article No.	Diameter range
Crownloc	* SD103-12.00-40-16R7	10.0-25.99 mm (0.394-1.023 in.)

*Example for Ø 12

Drill with exchangeable drill heads

Drill heads grade: P
Supplier: Seco
Sweden
www.secotools.com

Tool name	Article No.	Diameter range
Chamdrill	DCM xxx-xxx-xxA-xx.xx	7.5-25.9 mm (0.295-1.020 in.)

Drill with exchangeable drill heads

Drill heads grade: IC908
Supplier: Iscar
Israel
www.iscar.com

DRILLING IN TOOLOX

Tool name	Article No.	Diameter range
HSS -E Co 8 Taper Shank Drills, WN 103	832xxxx	8.0-40.0 mm (0.315-1.575 in.)

High-speed steel drill alloyed with 8 % cobalt (HSS-Co 8 %)

Supplier: Alpen-MayKestag
Austria
www.alpenmaykestag.com

Tool name	Article No.	Diameter range
HSS A100	A100xx.xx	0.2-20.0 mm (0.008-0.787 in.)

**High-speed steel drill standard
Only for Toolox 33**

Supplier: Dormer
Sweden
www.dormertools.com

TAPPING IN TOOLOX

Tap for blind holes

Tool name	Article No.	Diameter range
1641 TC	1641TC Mxx	18.0-75.0 mm (0.709-2.953 in.)

HSS-P tap with TiCN coating

Supplier: Yamawa
Japan
www.yamawa.eu

Tap for through holes

Tool name	Article No.	Diameter range
105/4 DUO	433xx	20.5-60.0 mm (0.807-2.362 in.)

HSSE-PM tap with TiCN coating

Supplier: Manigley
Switzerland
www.manigley.ch

Tap for blind holes

Tool name	Article No.	Diameter range
131/3 DUO	433xx	3.0-25.0 mm (0.118-0.984 in.)

HSSE-PM tap with TiCN coating

Supplier: Manigley
Switzerland
www.manigley.ch

Tap for blind holes

Tool name	Article No.	Diameter range
Rekord 1D-Ti-TiCN	B0459601.xxxx	M3-M10
Rekord 2D-Ti-TiCN	C0459601.xxxx	M12-M24

HSSE tap with TiCN coating

Supplier:
Emuge Franken
Germany
www.emuge.de/english

Tap for through holes

Tool name	Article No.	Diameter range
Rekord 1C-Ti-TiCN	B0309601.xxxx	M3-M10
Rekord 2C-Ti-TiCN	C0309601.xxxx	M12-M24

THREAD MILLING IN TOOLOX

Tool name	Article No.	Diameter range
GSF-VHM 2xD IKZ-HB TiCN	GSF333106xxxx	M3-M16

Solid carbide thread milling cutter with TiCN coating

Supplier: Emuge Franken
Germany
www.emuge.de/english

Tool name	Article No.	Diameter range
Solid carbide thread mill	NBxxxxxCxx x.xISO AC	M2-M42

Solid carbide thread milling cutter with TiAlCN coating

Supplier: SmiCut
Sweden
www.smicut.se

* For information about distributors contact Smicut.

COUNTERBORING IN TOOLOX

Use counterbore with indexable inserts that always have a grade number ending in H

Tool name	Article No.	Diameter range
WHV counterbore	XWHV-xx.x	18.0-75.0 mm (0.709-2.953 in.)

Supplier: Granlund tool AB
Sweden
www.granlund.com

COUNTERSINKING IN TOOLOX

Use countersink with indexable inserts that always have a grade number ending in H

Tool name	Article No.	Diameter range
KV countersink	xKV9-xx.x	20.5-60.0 mm (0.807-2.362 in.)

Supplier: Granlund tool AB
Sweden
www.granlund.com

END MILLING IN TOOLOX

Tool name	Article No.	Diameter range
JS 554 Siron-A	JS 554 xxxx	3.0-25.0 mm (0.118-0.984 in.)

Solid end milling cutter with Siron-A coating

Supplier: Seco
Sweden
www.secotools.com

MILLING WITH INSERT IN TOOLOX

Tool name	Article No.	Diameter range
Coromill 345	345-xxxxxx-13x	40-250 mm (1.575-9.843 in.)

Face milling with Coromill 345

Supplier: Sandvik Coromant AB
Sweden
www.sandvik.coromant.com

Tool name	Article No.	Diameter range
Coromill 300	R300-xxxxxx-xxx	10-200 mm (0.394-7.874 in.)

Face milling with Coromill 300

Supplier: Sandvik Coromant AB
Sweden
www.sandvik.coromant.com

Tool name	Article No.	Diameter range
Coromill 490	490-xxxxx-xxx	20-250 mm (0.787-9.843 in.)

Shoulder/face milling with Coromill 490

Supplier: Sandvik Coromant AB
Sweden
www.sandvik.coromant.com

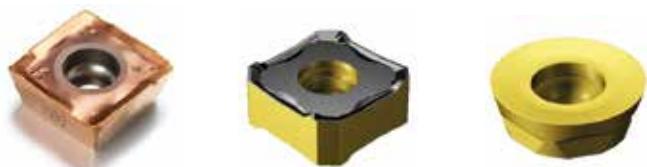

INSERT GRADE IN TOOLOX

Tool name	Article No.	Insert grade	Insert geometry
Coromill 300	R300-xxxxx-Px	1010	L-M-H
	R300-xxxxx-Px	1030	L-M-H
Coromill 345	345R-1305x-Px	1010	L-M-H
	345R-1305x-Px	1030	L-M-H
Coromill 490	490R-xxxxxxxx-Px	1010	L-M
	490R-xxxxxxxx-Px	1030	L-M-H

Use insert grade P1030 for average machine conditions. In very stable machine conditions and with a rigid set-up, insert grade P1010 is more suitable, especially in Toolox 40 and 44. Then you can increase the cutting speed by approximately 20-30%.
